Book Condition: New. Publisher/Verlag: Springer, Wien | A number of economically important diseases are caused by potyviruses, the largest group of plant viruses. Many of these diseases are distributed worldwide. The development of effective control strategies against viruses is dependent on the availability of reliable methods of identification and detection. To date this has not seemed possible for the potyvirus group, because of its size, complexity, and immense variation. This book brings together the collaborative efforts of experts in the field. It summarizes characteristics of potyviruses which relate to their taxonomy and points to areas which require consideration before an international consensus can be reached. Main topics dealt with in detail are: serological relationships, nucleic acid sequence information, biological properties, and specific problems with several virus subgroups or pairs of viruses. | Overview of potyviruses and taxonomy.- The general properties of potyviruses.- Application of genome sequence information in potyvirus taxonomy:an overview.- Inclusion bodies.- Potyviruses, chaos or order?.- What is a virus?.- Serology and antigenic relationships.- Serology of potyviruses: current problems and some solutions.- Polyclonal reference antisera may be useful for the differentiation of potyvirus species.- Proteolytic cleavage of the N-terminal region of potyvirus coat protein and its relation to host recovery and vector transmission.- Some unusual serological reactions among potyviruses.- Potyviruses, monoclonal antibodies, and antigenic sites.- Serological relationships involving poty viral non-structural proteins.- Potyvirus serology, sequences and biology.- Coat protein phylogeny and systematics of potyviruses.- Virus biology and variation.- Importance of host ranges and other biological properties for the taxonomy of plant viruses.- Clustering Potyviridae species on the basis of four major traits.- Specific infectivity and host resistance have predicated poty viral and pathotype nomenclature but relate less to taxonomy.- Sources of resistance to viruses in the Potyviridae.- Potential for using transgenic plants as a tool for virus taxonomy.- A...
